## Using UML note

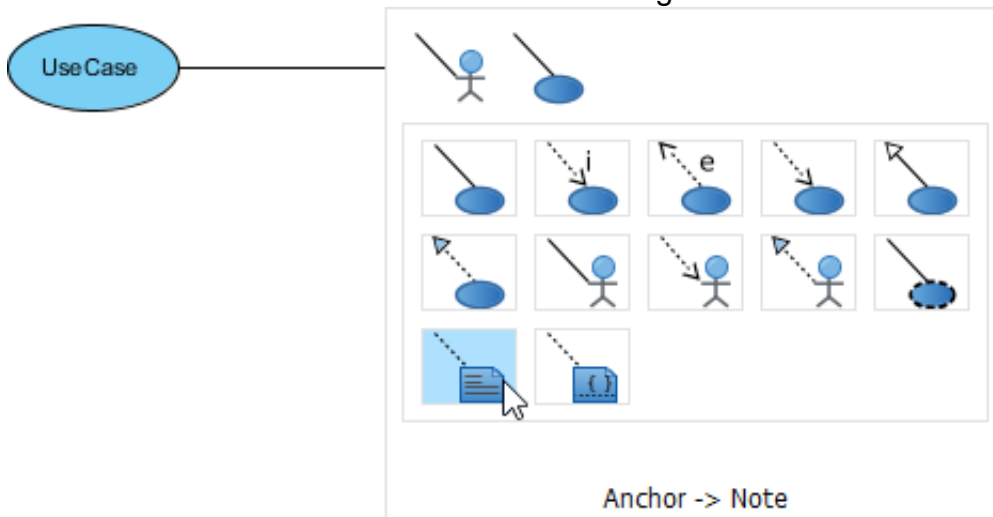

In Visual Paradigm, UML notes can be created and attached to a shape via an anchor connector. The premier advantage of using UML notes is to annotate a specific model element on the diagram with normal text or HTML text or to define OCL.

### Creating a UML note with resource centric

1. Move the mouse over a shape.
2. Press on the **Resource Catalog** icon and drag it out.

3. Release the mouse button at the position where you want to create the note shape.
4. Select **Anchor -> Note** from Resource Catalog.

5. The note is created and is connected with the shape.

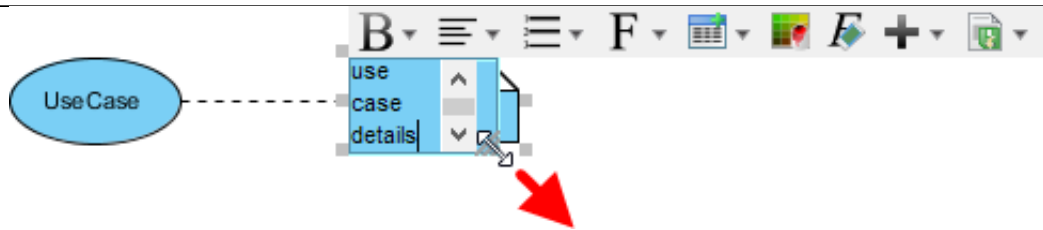

### Editing UML note content

1. Double click the note to start editing its content. Note that the toolbar above the note can be used to format its content.

2. Drag the bottom right corner of note to resize it.

3. Click on the diagram background to confirm editing the note.
