## Creating model elements in grid

Besides creating elements by drawing them on diagram, you can also create them in grid. Creating elements in grid gives you an overview on all elements of same type.

1. Click on the **New [Element]** button, where **Element** refers to the type of model element you have chosen in the **Model Element's** drop down menu.

2. Enter name for the newly created model element and then press **Enter** to confirm.
