
Working with content block

Opening the Underlying Element

If you want to open the source element from which a content was created, right click on the content block and select **Open %NAME%** from the popup menu where **%NAME%** is the name of the element. Very often you need this when you spot a design flaw when reading a document, and you want to correct it.

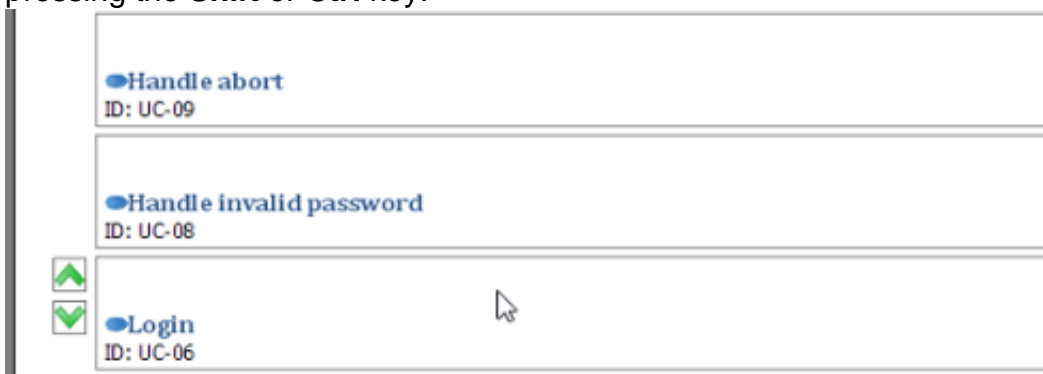

Opening the Specification of the Underlying Element

If you want to review or edit properties of an element from which a content was created, right click on the content block and select **Open %NAME% Specification** from the popup menu where **%NAME%** is the name of the element.

Re-positioning a Content Block

You can always re-order content blocks in a document by performing these steps:

1. Press to select the blocks to move up or down. You can perform a multiple selection by pressing the **Shift** or **Ctrl** key.

2. Click on **Move Up** or **Move Down** to re-order the selected blocks.

Deleting a Content Block

If you want to remove a content block from a document, simply select the blocks and press **Delete**.
