## Text and Property

When you want to output some text, you either use a or a .

You use when you want to output specific words, sentences or paragraphs, such as "Here is a list of business activities:". The following example show the use of in a template.

```
Here is a list of elements in my project: :
```

The first in the example above outputs a sentence "Here is a list of elements in my project: ".

The second outputs a colon between the name and type of elements. Note that the space before and after the colon will get output into the document.

Here is the outcome of the example above.

```
Here is a list of elements in my project: Place Order : UseCase Paym
entController : Class Cancel Order : BPTask
```
