
How to select UML class from source code in Android Studio

Once a [UML](#) class is associated with a Java source by code reversal/generation, you can select from source file the corresponding UML class in Visual Paradigm.

Selecting UML Class in Model Explorer

To select the UML class from a source file, right-click on the class file in any tree or in code editor and select **Visual Paradigm Enterprise > Select in Model** from the popup menu.

Selecting UML Class in Diagram

To select the view of UML class from a source file, right-click on the class file in any tree or in code editor and select **Visual Paradigm Enterprise > Select in Diagram** from the popup menu. If the class has been visualized with multiple views, you will be prompted to select a view to open.
