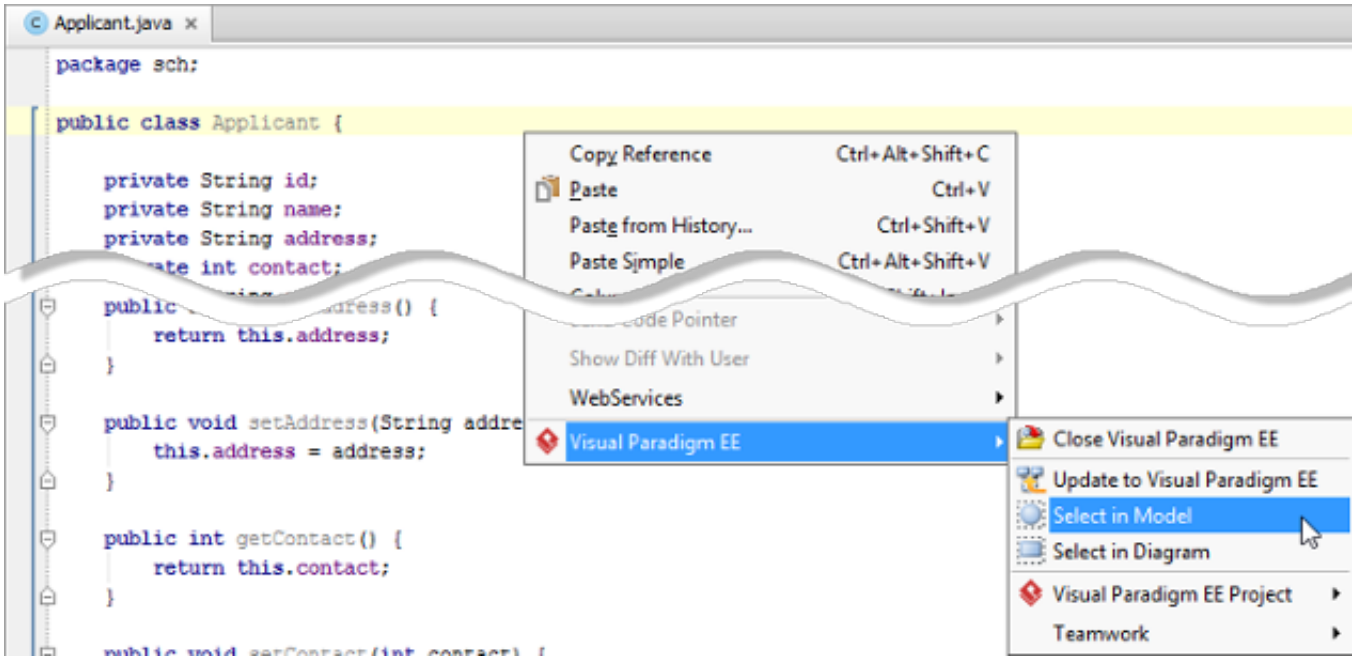
# How to select UML class from source code in IntelliJ IDEA

Once a UML class is associated with a Java source by code reversal/generation, you can select from source file the corresponding UML class in Visual Paradigm.

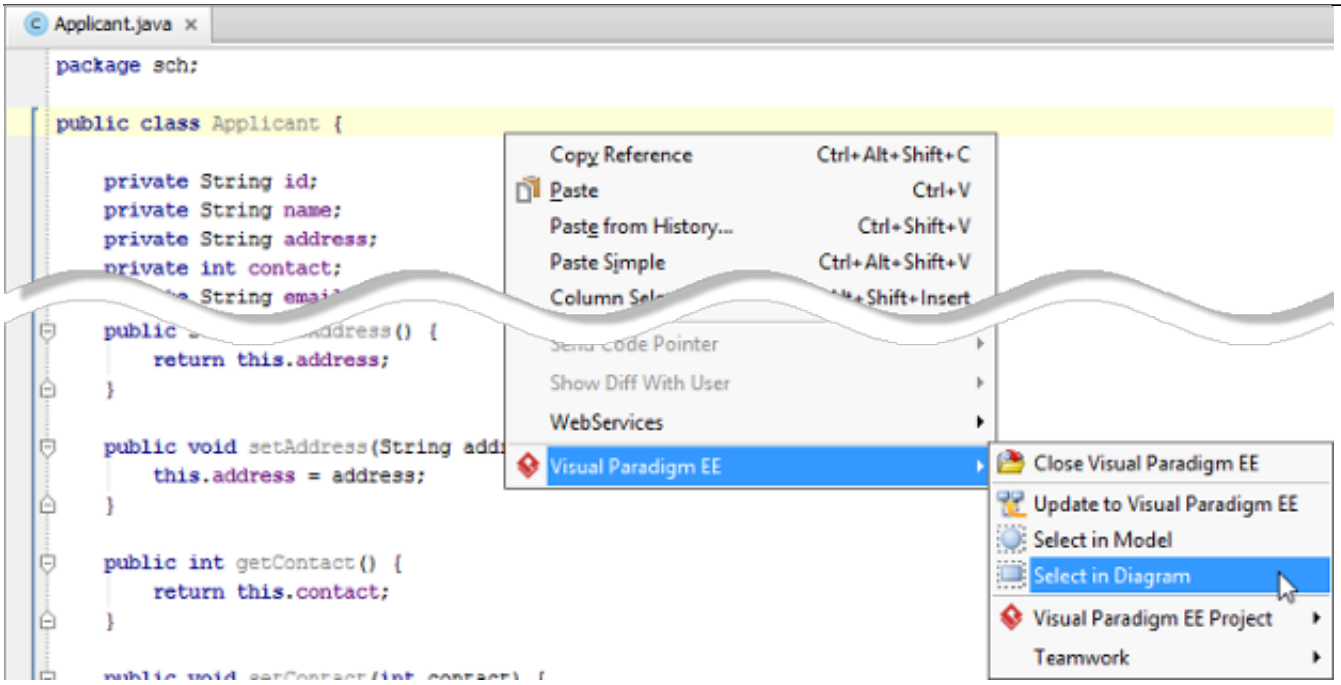
## Selecting UML Class in Model Explorer

To select the UML class from a source file, right-click on the class file in any tree or in code editor and select **Visual Paradigm EE > Select in Model** from the popup menu.



## Selecting UML Class in Diagram

To select the view of UML class from a source file, right-click on the class file in any tree or in code editor and select **Visual Paradigm EE > Select in Diagram** from the popup menu. If the class has been visualized with multiple views, you will be prompted to select a view to open.



Applicant.java
package sch;
public class Applicant {
private String id;
private String name;
private String address;
private int contact;
return this.address;
public void setAddress(String
this.address = address;
public int getContact() {
return this.contact;
