
How to perform analysis progressively with Analysis Diagram

Once a model is refined in an [analysis diagram](#), the previous analysis result may no longer reflect the latest changes. Therefore, you need to update the analysis result in order to perform impact analysis for the chosen element on the latest model.

1. Move the mouse pointer over the node that you want to update its relationships with others.

Note: Besides the central node, you may update/show the relationships of other Model nodes on diagram, too.

2. Click on the **Analyze** resource icon.

3. Select a type of relationship to analyze.
