

Opening the underlying view of a node in Analysis Diagram

When reading an [analysis diagram](#), you may find the existence of related model element or related diagrams, such as sub-diagram of the chosen model element. You can open the view of such related elements through the resource icons appear on top of the nodes.

Opening a diagram of diagram node

1. Move the mouse pointer over a **Diagram** node.
2. Click on the **Open Diagram** resource icon.

Opening a view of model node

1. Move the mouse pointer over a **Model** node.
2. Click on the **Open View** resource icon.

3. If the target model has only one view, that view is opened. If there are multiple views, the **Show View** window is presented. Select a view to open and click **Go to View** at the bottom right of window.
