
Working with the Teamwork Client window

Teamwork Client is where you can manage your projects. It enables you to select/de-select projects to work on with, and to provide you with access to all team operations like commit, update, branching, tagging, etc.

If you have already logged into either Visual Paradigm Online or Teamwork Server, you can open **Teamwork Client** by selecting **Team > Utilities > Open Teamwork Client...** from the toolbar of Visual Paradigm.

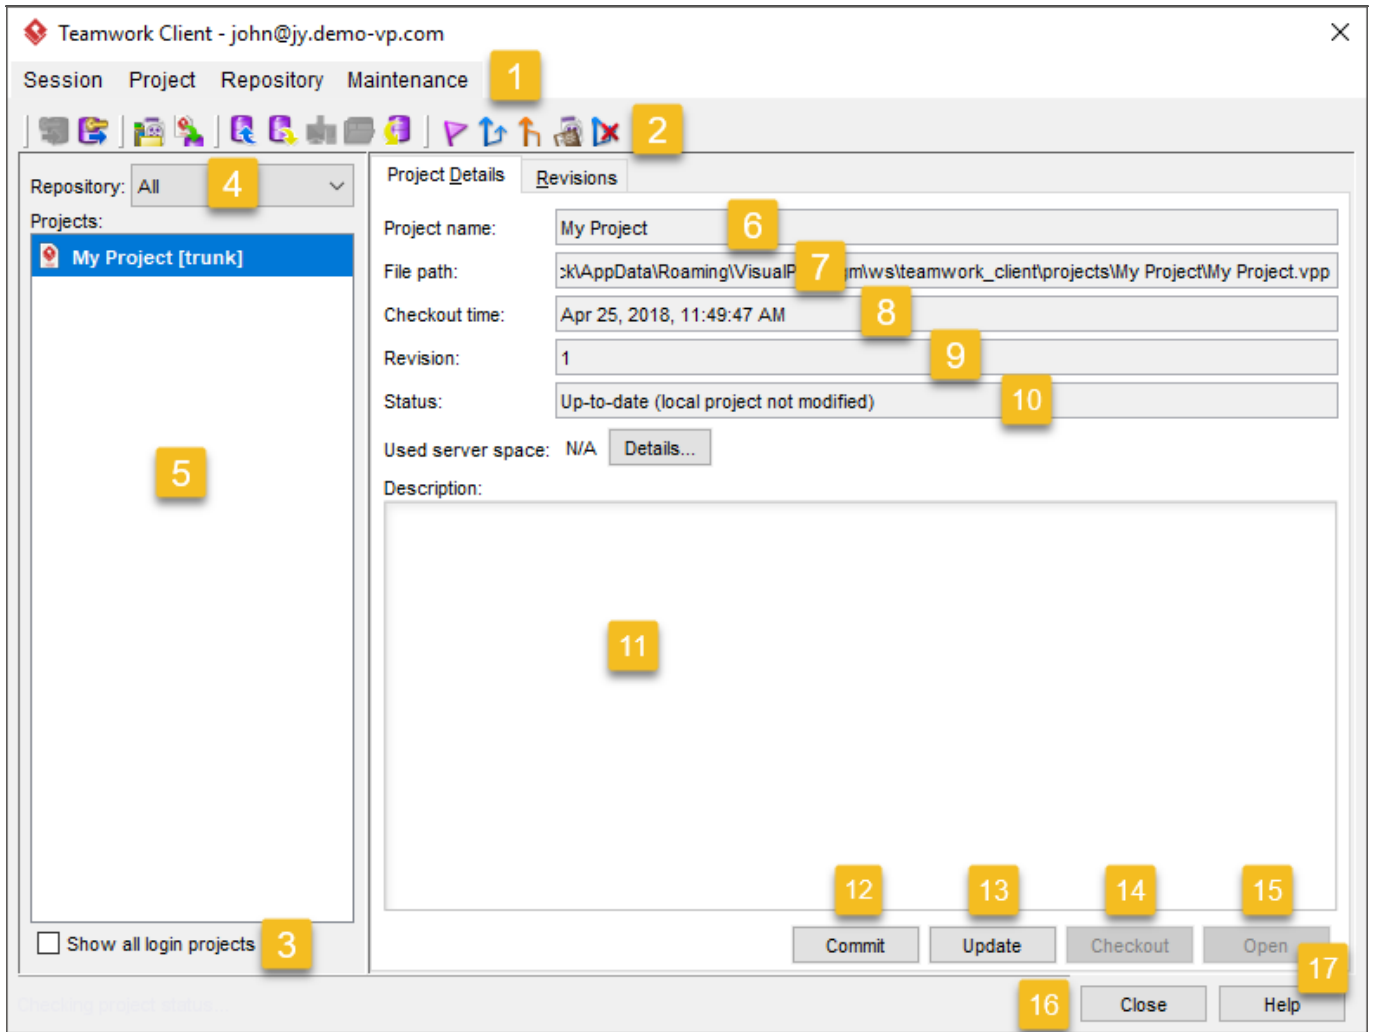

If you have not yet logged into Visual Paradigm Online or Teamwork Server, open **Teamwork Client** by performing the steps below.

1. Select **Team > Select Repository** from the toolbar of Visual Paradigm. You are prompted to connect to either Visual Paradigm Online (VP Online) or Teamwork Server, which are both collaboration servers that provide the capability of team collaboration. VP Online is a cloud-based workspace maintained by Visual Paradigm, while Teamwork Server is a self-hosted version of Visual Paradigm Online. If your team is not yet a user of either service, we recommend you [sign-up VP Online](#). If you already have an account on either VP Online or Teamwork Server, click **Log-in** and enter the account details to log in.

2. Once you are connected to a server, you can open Teamwork Client by selecting **Team > Utilities > Open Teamwork Client...** from the toolbar of Visual Paradigm.
